

Agile Software Project Management

ScrumMaster Certification

Agile Work methods promise early, continuous and accelerating return on investment for stakeholders and high degrees of job satisfaction for team members. One of these agile methods, Scrum, is particularly appropriate for software-focused projects including new product development, corporate IT projects and software development outsourcing. In this two-day course, you will learn the foundational skills of agile software project management as defined by the Scrum methodology. Participants who pass this course will receive the Certified ScrumMaster designation.

Day One

Introductions
Foundations and History of Scrum
Overview of the Scrum Process
The Product Backlog
Self-Organizing Teams
The ScrumMaster
Scrum Simulation Exercise

Day Two

Scrum Meetings
Sprints and the Sprint Backlog
Teaching Others About Scrum
Two Of:
User Stories
Test-Driven Work
Reporting and Metrics
Open Discussion
Graduation

About The Trainer, Mishkin Berteig

Mishkin Berteig is a seasoned agile coach and instructor with 10 years of experience with agile methods. Mishkin is certified to deliver the ScrumMaster training. He has worked with clients such as Charles Schwab and CapitalOne as well as numerous smaller organizations. Mishkin is principle contributor to [Agile Advice](#).

Agile methodologies are the way of the future and Mishkin Berteig and his able bodied staff and volunteers deliver a very large amount of value in a very short amount of time. His class on agile project management answered many of my questions about Scrum and agile work.... - Alex Sirota, consultant to non profits and the public sector

Mishkin is a very effective trainer who successfully communicated some abstract ideas to a challenging class in a suprisingly brief period of time. - Jason Dugard, PMO, Telmetrics
